

Phoenix Suite® (PS)

Enterprise Automation for your Business Needs

STANDALONE

Each tool within Phoenix Suite is designed to function in standalone mode for easy integration into your existing environment.

TIGHT INTEGRATION

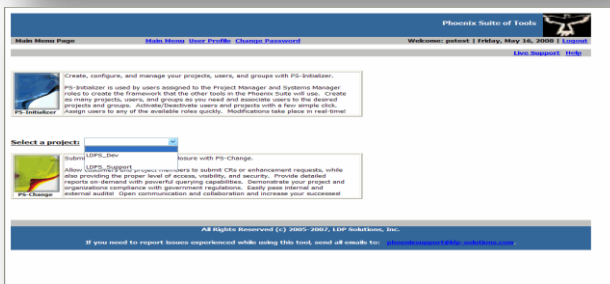

Each tool tightly integrates with other tools within the suite providing seamless information flow throughout the business.

PROCESS

Each tool provides automation for routine, day-to-day tasks making them measurable and repeatable.

AUDITS

Provide information and reports on demand during times of audit. Powerful querying and reporting allows your organization to produce information from the most common aspects of your enterprise.

Phoenix Suite™ (PS) is a set of tools dedicated to providing enterprises with a fully integrated, end-to-end solution. PS automates many routine, day-to-day tasks which allows for better communication and collaboration across your entire business.

Each tool within PS can also operate in a standalone mode, which means clients with existing infrastructures and tools can easily integrate one or more PS tools into their environments. Standalone operation also means PS can grow to adapt to your latest business requirements.

Because of its powerful, flexible, and scalable architecture, Phoenix Suite ensures your business remains competitive in the marketplace. Always, deliver your products and services faster than your competitors!

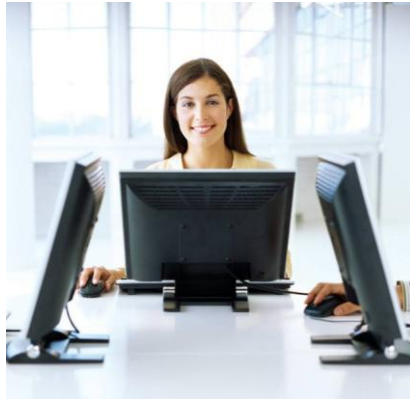

- Powerful, scalable, flexible! Phoenix Suite grows with your business needs and requirements.
- The first suite of tools designed to provide complete enterprise coverage in a tightly integrated manner.
- Use the tools you need (standalone) in your existing environment or use them all (end-to-end integration) to add value.
- Stay ahead of your competitors by delivering your products and services to market faster and with higher quality.

PS also supports distributed business environments by offering centralized access. It eliminates the need to costly synchronization solutions that often break or are difficult to implement due to extreme time zone differences.

PS security is continuously monitored to ensure it is compliant with the latest industry approved technology. PS eliminates the need to open corporate firewalls and introducing unnecessary risks to your business and increasing your confidence.

Maximize your Return on Investment (ROI) by minimizing your up front costs and Total Cost of Ownership (TCO). Increase your organization's revenue, reputation, and market share today!

Features and Benefits

SECURITY

Phoenix Suite security practices are constantly monitored to ensure the safest possible working environment for the user community.

ADDED VALUE

Phoenix Suite reduces up front costs and costs associated with traditional licensing models while still providing the expected power, flexibility, and scalability. Phoenix Suite offers lower TCO and higher ROI.
